

Dataset(s) description

In this project, I will use three sets of data.

Toronto dataset

- It will have information such as Toronto postal codes, boroughs, neighbourhoods.
- I will use it to glean information about the neighbourhoods.

Geocodes

- It will have information about geo coordinates, i.e., latitude and longitude.
- I will use it to glean information about the geo coordinates of the neighbourhoods so that I can get the venues from Foursquare.

Venues

- It will have information from Foursquare about different venues in the city of Toronto including the types of venues, reviews, and so on.
- I will use it to glean information about the venues in different Toronto neighbourhoods.
